

Lab 2 (30 min)

In this lab you will experience JFrog Advanced Security value with actual docker images scanning.

Upon successful completion of this lab you will gain knowledge of how to use the Security issues page and extract relevant value from it

Step by step instructions

Phase #1 - Pulling a docker image:

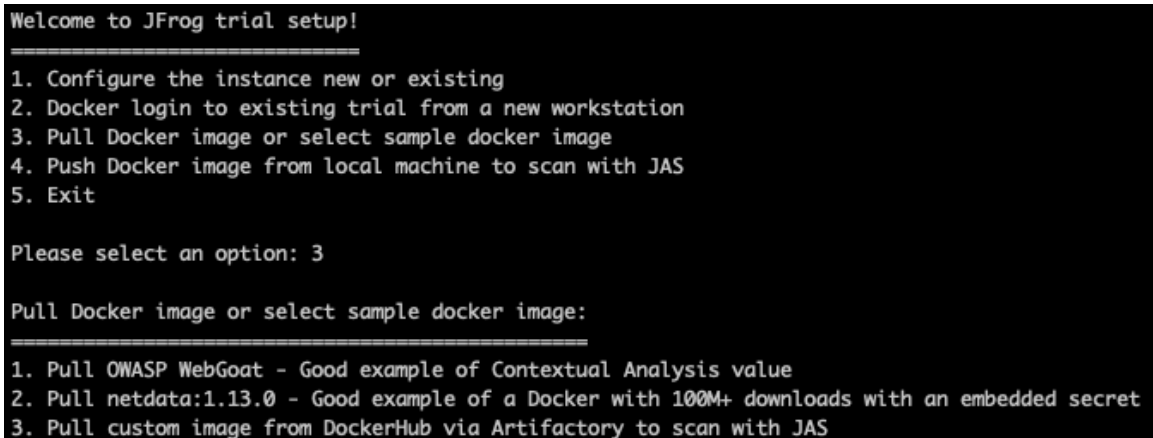

1. Open the terminal used in Lab 1 and run:

```
bash guided-trial/linux_guided_trial.sh
```

Or, in case you've closed it, open a new terminal and select option #2 ("Docker login") to re-login to your JFrog Environment.

2. From the menu, select option #3:

```
Pull Docker image or select sample docker image
```

```
Welcome to JFrog trial setup!
=====
1. Configure the instance new or existing
2. Docker login to existing trial from a new workstation
3. Pull Docker image or select sample docker image
4. Push Docker image from local machine to scan with JAS
5. Exit

Please select an option: 3

Pull Docker image or select sample docker image:
=====
1. Pull OWASP WebGoat - Good example of Contextual Analysis value
2. Pull netdata:1.13.0 - Good example of a Docker with 100M+ downloads with an embedded secret
3. Pull custom image from DockerHub via Artifactory to scan with JAS
```

3. Now select 'WebGoat', option #1:

Pull OWASP WebGoat - Good example of Contextual Analysis value

```
Pull Docker image or select sample docker image:
=====
1. Pull OWASP WebGoat - Good example of Contextual Analysis value
2. Pull netdata:1.13.0 - Good example of a Docker with 100M+ downloads with an embedded secret
3. Pull custom image from DockerHub via Artifactory to scan with JAS

Please select an option: 1

latest: Pulling from docker-hub-remote-repo/webgoat/webgoat-8.0
Digest: sha256:e24bcaf41034c28b6a08aba94507a169ae23f2b87899e225a3d18fe8c36d26f5
Status: Downloaded newer image for qawsed.jfrog.io/docker-hub-remote-repo/webgoat/webgoat-8.0:latest
qawsed.jfrog.io/docker-hub-remote-repo/webgoat/webgoat-8.0:latest

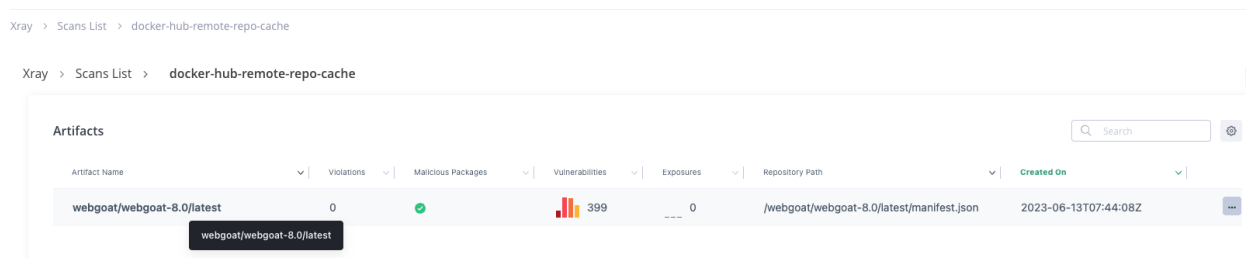

[+] Docker pull operation is complete, running SCA... opening the web browser in 30 seconds
    IMPORTANT: Please note JAS analysis might take up to 5 minutes
[=====] 30/30 seconds

Docker image pulled via JFrog Platform!
```

Note how the docker image is being pulled from Docker Hub, through Artifactory to your personal laptop.

Your browser will be opened to your server's scan results page (results may take up to 5 min to complete).

- Once scanned, click on the docker image to view the results:

- Look at "CVE-2022-22965"
 - Is it applicable to this docker image?
 - What is the risk?
 - What is the remediation process?
- Now look at "CVE-2019-12900"
 - Note the CVSS score of 9.8!
 - Why is it not applicable to this docker image?
- How many Critical, yet NOT APPLICABLE vulnerabilities were detected by the system?

Phase #2 - Pushing a docker image:

- Go back to your terminal & select option #4 from the menu:

Push Docker image from local machine to scan with JAS

```
Welcome to JFrog trial setup!
=====
1. Configure the instance new or existing
2. Docker login to existing trial from a new workstation
3. Pull Docker image or select sample docker image
4. Push Docker image from local machine to scan with JAS
5. Exit

Please select an option: 4

Push Docker image from local machine to scan with JAS:
=====
Listing available docker images on local machine:

REPOSITORY                                TAG          IMAGE ID      CREATED        SIZE
docker/disk-usage-extension                0.2.7        d2973444a992  5 weeks ago   2.81MB
netdata/netdata                            latest       39817e709c76  6 weeks ago   382MB
jfrog/jfrog-docker-desktop-extension      1.2.1        81a26272260a  9 months ago  82.3MB
webgoat/webgoat-8.0                       latest       6664051b8808  3 years ago   380MB
vulhub/log4j                              2.8.1        3b6452a32dc9  5 years ago   207MB

Enter Docker image name and then its tag:
=====
Enter the Docker image name (REPOSITORY column):
```

Select a docker image from the list of available images on your laptop and push it.
See how the image is uploaded to Artifactory.

Note: If you do not have one in your workstation, run in a 2nd terminal: " `docker pull netdata/netdata:v1.13.0`"

The examples below are using the public netdata image.

Your browser will be opened to your server's scan results page (results may take up to 5 min to complete).

```

Enter Docker image name and then its tag:
=====
Enter the Docker image name (REPOSITORY column): netdata/netdata
Enter the Docker tag: v1.13.0

The push refers to repository [qawsed.jfrog.io/local-docker-repo/netdata/netdata]
ac38a3b29247: Pushed

13. Does your selected image have any application exposures?

Xray > Scans List > local-docker-repo > netdata/netdata/v1.13.0 Run Contextual Analysis

Scan Name: local-docker-repo/v1.13.0 **Issues TO FIX (3)** Checked OK (4)

3 Applications Issues TO FIX

Status	Jfrog Severity	ID	Description	File path	CWE	Outcomes
TO FIX	High	EXP-1065-00001	Python applications do not enforce TLS version 1	/usr/libexec/netdata/...	CWE-757	Traffic interception
TO FIX	High	EXP-1065-00002	Python applications do not enforce TLS version 1	/usr/libexec/netdata/...	CWE-757	Traffic interception
TO FIX	High	EXP-1065-00003	Python applications do not enforce TLS version 1	/usr/libexec/netdata/...	CWE-757	Traffic interception

14. Does your selected image have any secrets detected?

Xray > Scans List > local-docker-repo > netdata/netdata/v1.13.0 Run Contextual Analysis

Scan Name: local-docker-repo/v1.13.0 **Issues TO FIX (3)** Checked OK (2)

3 Secrets Issues TO FIX

Status	Jfrog Severity	ID	Description	File path	CWE	Outcomes
TO FIX	High	EXP-946-00001	Weak, default, or well-known passwords are in u	/usr/lib/netdata/conf...	CWE-259	Credential exposure
TO FIX	High	EXP-946-00002	Weak, default, or well-known passwords are in u	/usr/lib/netdata/conf...	CWE-259	Credential exposure
TO FIX	High	EXP-946-00003	Weak, default, or well-known passwords are in u	/usr/lib/netdata/conf...	CWE-259	Credential exposure

Congratulations! You have completed Lab 2

Phase #3 - Advanced

12. Browse through the PDF in your guided trial folder and read/experiment with the system's other capabilities and features
13. Push additional popular docker hub images to view advanced results
 - a. [mvila/npm-addict:production](#) - This image has a malicious package.
 - b. [bkimminich/juice-shop:latest](#) - This has Application and Secret Exposures.
 - c. [nginxdemos/hello:latest](#) - This has Service Exposures (nginx)

Artifacts
